Lato26 · measurable spacing review

Blur each glyph at 6%, 12%, and 24% of x-height, keeping its actual kerned position.

Measure the overlap of the two blurred ink fields from the baseline to x-height.

At each scale, divide by current le overlap. Average the three ratios

geometrically: le = 1.00; a higher index means stronger interaction between the ink fields.

Use the index as an ink-interaction diagnostic; different shapes need not have equal values.

Smaller l: preserve special-pair edge gaps; ordinary pairs follow the narrower advance.

The Regular edit is propagated through upright and italic weights and related forms.

Lower third, right half ink: upright a 59% / e 38%; italic a 53% / e 36%.

Regular upright kern changes: la +34 / le +34 / lo +34 / ly +34 units. lc and lo match le.

2,000 units/em. Preserve the existing a +20, w +8, y +14 breathing-room preferences.

Related approach: HalfKern - github.com/behdad/halfkern

Regular resolution check: doubling the raster size changes the sampled indices by at most 0.2%.

Blur index: Lato 2.015 / previous Lato26 / current Lato26

Lato 2.015 uses its own le = 1; both Lato26 columns use current le = 1.

Per-scale values and all 468 l/a-z measurements are saved in optical-spacing.json and .csv.

Lato26 · outlines and blurred shapes

Regular Upright

Blur: 12% of x-height, shared scale within each row. Indices combine all three scales.

Before: previous Lato26
