Lowercase l spacing

All 26 pairs, 9 nominal weights, upright and italic. Equal x-height.

Regular upright: horizontal edge gaps

Percent of x-height; lower values mean less horizontal separation.

Pair	Lato26	Fira Sans	Lato26	Fira Sans
la	6.2%	11.4%	la	la
lc	5.2%	14.6%	lc	lc
le	5.2%	14.6%	le	le
lh	15.0%	22.2%	lh	lh
lk	15.0%	22.2%	lk	lk
ll	15.9%	21.1%	ll	ll
lo	5.2%	14.6%	lo	lo
lw	1.6%	8.5%	lw	lw
ly	-2.5%	4.7%	ly	ly

Interpretation

Compare each shape against the vertical-left lh anchor, as well as the absolute gap.

Against le = 1, lh/ll indices: Lato26 0.96/0.60; Fira 1.00/0.93.

The index describes the spacing pattern; equality is not a target.

Both Regular uprights give lh and lk identical spacing; Lato26 tightens ll.

Weight matters: Fira Bold has tighter lh and ll gaps than Lato26 Bold.

Negative diagonal gaps mean overlapping x extents, not intersecting outlines.

Reading the detailed pages

K = pair adjustment per 1,000 em (negative tightens). G = gap as % of x-height.

B = geometric mean of ink-overlap ratios at blur radii 6%, 12%, 24% of x-height.

B is normalized to le = 1 in each font. Higher B means more ink interaction.

B is a shape-sensitive diagnostic, not a perceptual score or a target to copy.

All numbers are Lato26 / Fira Sans. Unhinted raster audit; vector specimens.

K: adjustment / 1,000 em. G: horizontal edge gap / x-height %. B: blur index (le = 1).

Values: Lato26 / Fira Sans. Specimens: equal 15 pt x-height; no fl ligatures.

Method and reference files

Reproducible measurements; no outlines, spacing, or hints were changed.

Scope: 936 pairs = 26 letters x 18 styles x 2 families.

HarfBuzz default Latin shaping; validated against Pillow/RAQM and GPOS.

K is the difference between the shaped pair advance and unkerned advances.

G = origin of second glyph + its xMin - rightmost xMax of l.

G compares horizontal extents; curves and diagonals can approach at other heights.

Blur uses unhinted FreeType coverage at about 256 pixels per x-height.

It measures ink-field overlap from baseline to x-height at three blur radii.

Resolution checks repeat selected Regular/Bold upright pairs at 512 pixels.

Equal nominal weight does not guarantee equal darkness or stroke thickness.

Hairline is paired with Fira Thin (100); Thin with UltraLight (200).

Heavy is paired with Fira ExtraBold (800); Black with Heavy (900).

Other weights match their nominal 300-700 classes directly.

The comparison uses default glyph forms and excludes fl ligatures.

Reference: official bBox Type Fira Sans 4.301, normal width TTFs.

https://github.com/bBoxType/FiraSans

Pinned upstream commit: f54eeb3124c63fe9b5bcd36d09d1cd46788cd15e

Font hashes, weight mapping and all measurements: fira-spacing-comparison.json

Maximum blur-index change when doubling raster resolution: 0.36%.

Reference fonts are cached separately under their original OFL license.
