Lato26 · measurable spacing review

Blur each glyph at 6%, 12%, and 24% of x-height, keeping its actual kerned position.
Measure the overlap of the two blurred ink fields from the baseline to x-height.
At each scale, divide by the overlap of Ie in the same font. Average the three ratios
geometrically: Ie = 1.00; a higher index means stronger interaction between the ink fields.
Use the index as an ink-interaction diagnostic; different shapes need not have equal values.
Ia and Ic show stronger interaction than Ie. Regular Iw/Iy are already below Ie under
this model; their small additions follow the requested rhythm, not an automatic optimum.
Lower third, right half ink: upright a 59% / e 38%; italic a 53% / e 37%.

Applied: Ia +20 units; Iw +8; Iy +14. Ic matches the Ie outline-edge gap.

2,000 units/em. Additions: 1.0%, 0.4%, 0.7% of an em; constant across weights.

Related approach: HalfKern - github.com/behdad/halfkern

Regular resolution check: doubling the raster size changes the sampled indices by at most 1.2%.

Blur index: previous Lato26 / current Lato26

Bold Italic	2.76 / 2.15	2.55 / 1.02	1.52 / 1.34	1.18 / 0.95
Heavy Italic	2.63 / 2.07	2.47 / 1.02	1.50 / 1.33	1.16 / 0.94
Black Italic	2.44 / 1.93	2.36 / 1.02	1.48 / 1.33	1.12 / 0.92

The a/w/y amounts are restrained design choices; the audit reports their measured effects.
Per-scale values and all 468 l/a-z measurements are saved in optical-spacing.json and .csv.

Lato26 · outlines and blurred shapes

Regular Upright

The blur panels use 12% of x-height. Indices combine all three blur scales.
